

HOW TO INSERT THE TAP ON ANY EUCA LIQUID DRUM - 10LT & 20LT

You will either need a large flat head screwdriver, a wide blade tool or our unique 'Bung Remover Tool,' which you can find in the 'Accessories and Replacement Parts' of our website.

NOTE: The Bung is the insert in the lower front of the container just under the label.

1

While the drum is upright - remove black top lid.
Bung Tool makes removing easier.

2

Remove the hidden tap, screwed in under the lid. Replace Black Lid - ensure it is tight enough so that it doesn't leak.

3

While the drum is upright - remove black top lid.
Bung Tool makes removing easier.

4

Place drum on it's back side, with the white bung (plug) facing upright.

HOW TO INSERT THE TAP ON ANY EUCA LIQUID DRUM - 10LT & 20LT

5

Screw in the tap clockwise (so it is firm only). When turning determine when the last rotation will be so that the mouth of the tap is facing down.

In some instances, you may have to turn the tap backwards (anti-clockwise) to allow the mouth of the tap to face downwards. If you feel it may be too loose in the thread, remove the tap again and place some plumbing tape or glad wrap around the thread to allow a tighter fit. Do not cover or block the back of the tap that goes into the container. NOTE: They are mass produced, so they may not always tighten to the 'down position'.

6

Return the drum to the upright position, check that the tap is closed and there are no leaks.

While upright, if there are any leaks, you may need a small container to catch any dripping liquid as over time the tap can drip.

7

Loosen the black lid on top to allow the product to flow out of the tap (air pressure).

NOTE: Sometimes you need to remove the cap fully or tip the drum forward to get a good flow. Always be careful when doing this.
